

CARE GUARDIAN

Software that cannot betray the people it serves.

A privacy-first tool for families managing a parent's dementia care.

THE PROBLEM

Caregiving and health apps hold the most sensitive data a person has — and quietly harvest, breach, and monetize it. The person in the data has dementia and cannot consent or object.

THE INSIGHT Build software that is structurally incapable of betraying its users — no server to breach, no data to sell, no telemetry to leak. Not a promise. An architecture.

A standard, not just an app

Privacy Principles for Caregiving Software — nine verifiable principles others can adopt, making Care Guardian the reference others organize around.

Built to last

Open-source core, free forever. Sustained by optional paid hosting, support, and funded state-by-state content — never by monetizing the data.

WHAT WE'LL NEVER BE

A surveillance platform

A data business

Venture-funded with an exit

WAYS TO PARTICIPATE

Funders & foundations

- Introductions to elder-law & care-manager networks
- A flagship pilot partner willing to be a reference
- Endorsement of the Privacy Principles
- Fund one deliverable: an audit, a state package, a maintainer

Developers & contributors

- Co-maintainers — help fix a bus factor of one
- State-package owners for your jurisdiction
- An external security review
- Accessibility expertise for elderly, stressed users
